Kolkata, India

Summary

Second-year Information Technology student with a strong foundation in backend development, database systems, and computer networking. Experienced in building scalable applications using Spring Boot and React. Proficient in SQL, REST APIs, and system design fundamentals, with consistent practice in data structures and algorithms.

Technical Skills

Programming Languages: Java, C, JavaScript, SQL

Backend & APIs: Spring Boot, REST APIs, JWT Authentication, JDBC

Database: PostgreSQL, MySQL, Appwrite, Database Design, Normalization, Indexing

ORM: JPA, Hibernate, Entity Mapping, Annotations

Frontend: React, Tailwind CSS, HTML, CSS

Networking: OSI Model, TCP/IP, HTTP, IP Addressing, NAT

Tools: Git, GitHub, Postman, LaTeX

Projects

Waste2Worth – Full-Stack Waste Management Platform

- Built a full-stack platform enabling users to schedule waste pickups and earn rewards through affiliate-based e-commerce links.
- Engineered secure REST APIs using Spring Boot and JWT for authentication, session management, and role-based access.
- Designed an optimized PostgreSQL schema for handling waste categories, pickup workflows, and reward transactions.
- Developed an interactive React dashboard to track pickup status and manage reward redemption.

RotoGuard – IoT-Based Machine Monitoring Platform

- Developed a real-time monitoring system to track machine health using simulated sensor data (temperature, vibration).
- Implemented WebSocket-based communication in Spring Boot for continuous streaming of live data to a React frontend.
- Designed efficient data handling strategies to manage high-frequency telemetry and store critical events in PostgreSQL.
- Built interactive dashboards in React to visualize live machine status and performance trends.

SerenScribe Blog Application

- Built a full-stack blog platform using React, Tailwind CSS, and Appwrite.
- Implemented blog creation, editing, and viewing with user-specific content.
- Integrated TinyMCE editor and optimized content handling for improved user experience.

Real-Time Chat Application

- Developed a real-time chat system using React and Appwrite with live messaging capabilities.
- Implemented typing indicators and real-time updates using event-driven architecture.

Education

Narula Institute of Technology
B.Tech in Information Technology
CGPA: 7.73

2023 – 2027

Saint Paul's School (CISCE)

Class 12: 90.25% — Class 10: 90.47%

Experience

Hackathon Participant

- Selected among top 48 teams out of 200+ teams in a competitive hackathon.
- Contributed to the design and development of RotoGuard, a machine monitoring system.
